

» I can't hear my recording. What do I do? (Windows 10)

If you are having issues with recording audio in your Windows 10 machine, you can use Voice Recorder to test your microphone and ensure it is not a hardware issue with your computer or your microphone/headset.

1. In Windows 10, type "voice recorder" in Cortana's search box.	
2. Click or tap the first result that shows up.	
3. Ensure your microphone is connected to use Voice Recorder.	
4. Use the Voice Recorder app to test your microphone/headset. Make sure you can record a few seconds of audio and then play it back. If you are unable to hear and/or record audio, please try a different headset or microphone.	
5. If you are still having issues with recording, contact techsupport@communication-coach.com
